Time Domain Comparison

Original ECG vs Manulally Downsampling vs resample()

Original ECG Signal ($f_s = 1000$ Hz)

Manually Downsampled ($f_s = 200$ Hz)

Using `resample()` ($f_s = 200$ Hz)

Time Domain Comparison (Full Signals)

Time Domain Comparison (Full Signals)

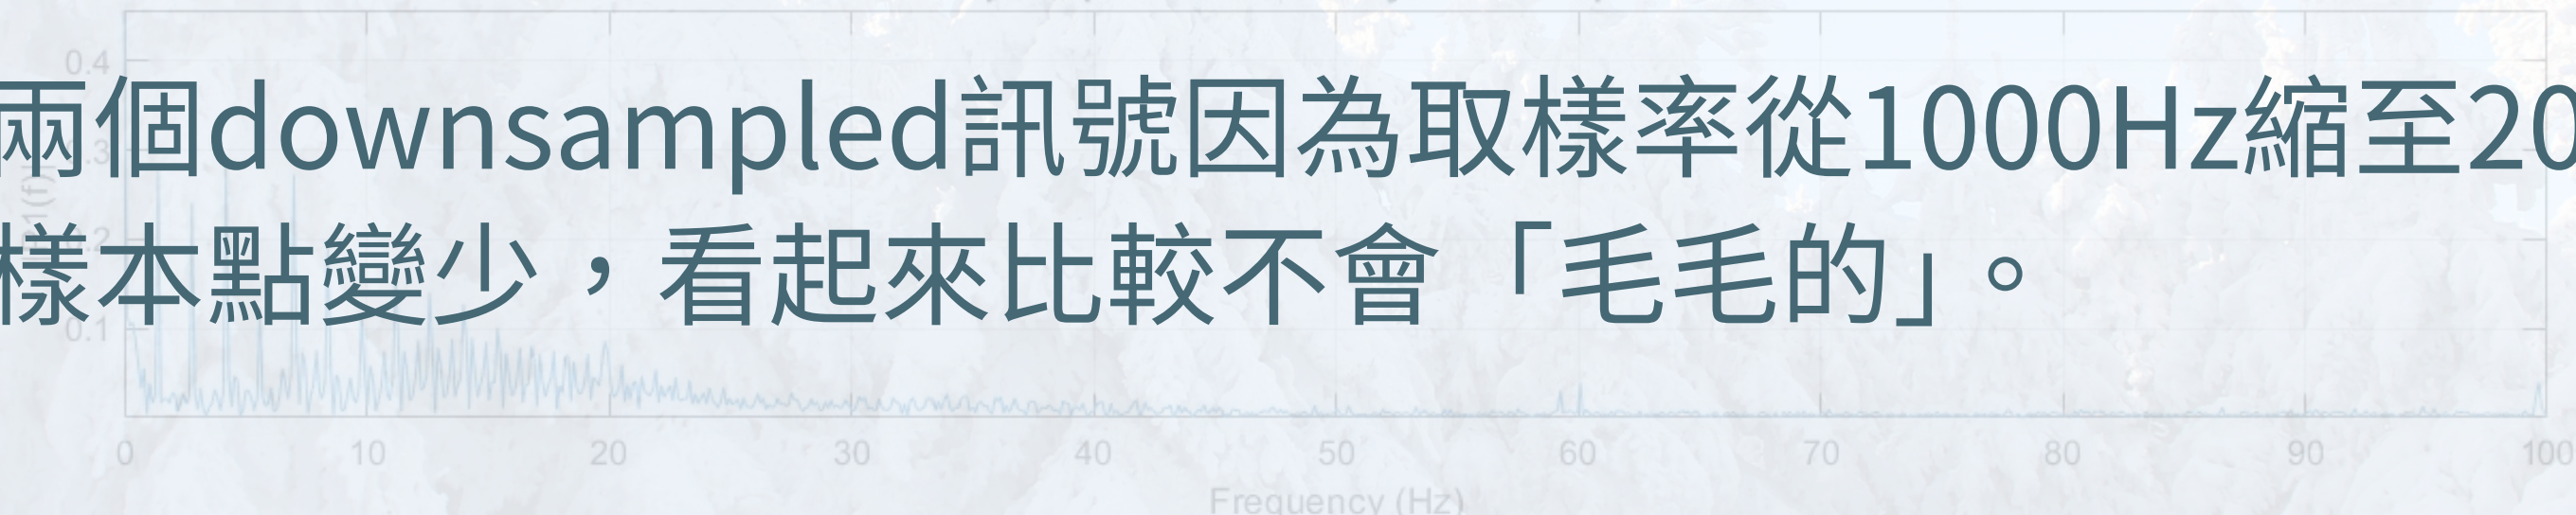

Frequency Domain Comparison (Full Signals)

Frequency response of Original ECG

- 原訊號看起來比另外兩個downsampled 的還要「毛毛的」。

- 其他兩個downsampled訊號因為取樣率從1000Hz縮至200Hz，導致樣本點變少，看起來比較不會「毛毛的」。

- 手動降採樣還是比使用resample()的毛，那是因為有高頻雜訊被混疊進來了。

Time Domain比較結果(2)

Time Domain Comparison (Full Signals)

Original ECG Signal

原訊號因為雜訊
看起來比另外兩個還要「毛毛的」。

Manually Downsampled ECG

其他兩個downsampled訊號因為取樣率從
1000Hz縮至200Hz，導致樣本點變少，看起
來比較不會「毛毛的」。

ECG Downsampled using resample(

手動降採樣還是比使用resample()的毛，
那是因為有高频雜訊被混疊進來了

Time Domain比較結果(3)

用於量化分析的選定雜訊片段

原始訊號雜訊片段 (2.755s 至 2.955s)

手動下取樣雜訊片段

Resample後雜訊片段

- 取2.755~2.955 s作為雜訊片段
- 嘗試找出各自的峰對峰值

```
>> ecg_hfn  
---- 量化分析 ----
```

1. 量化時域分析 (雜訊片段的峰對峰值):

原始訊號雜訊片段的峰對峰值: 0.72067

手動下取樣雜訊片段的峰對峰值: 0.72067

Resample後雜訊片段的峰對峰值: 0.29361

- 這告訴我們resample()幫助我們消除了高頻雜訊的影響

Frequency Domain Comparison

利用FFT

Original ECG Signal ($f_s = 1000$ Hz)

Manually Downsampled ($f_s = 200$ Hz)

Using `resample()` ($f_s = 200$ Hz)

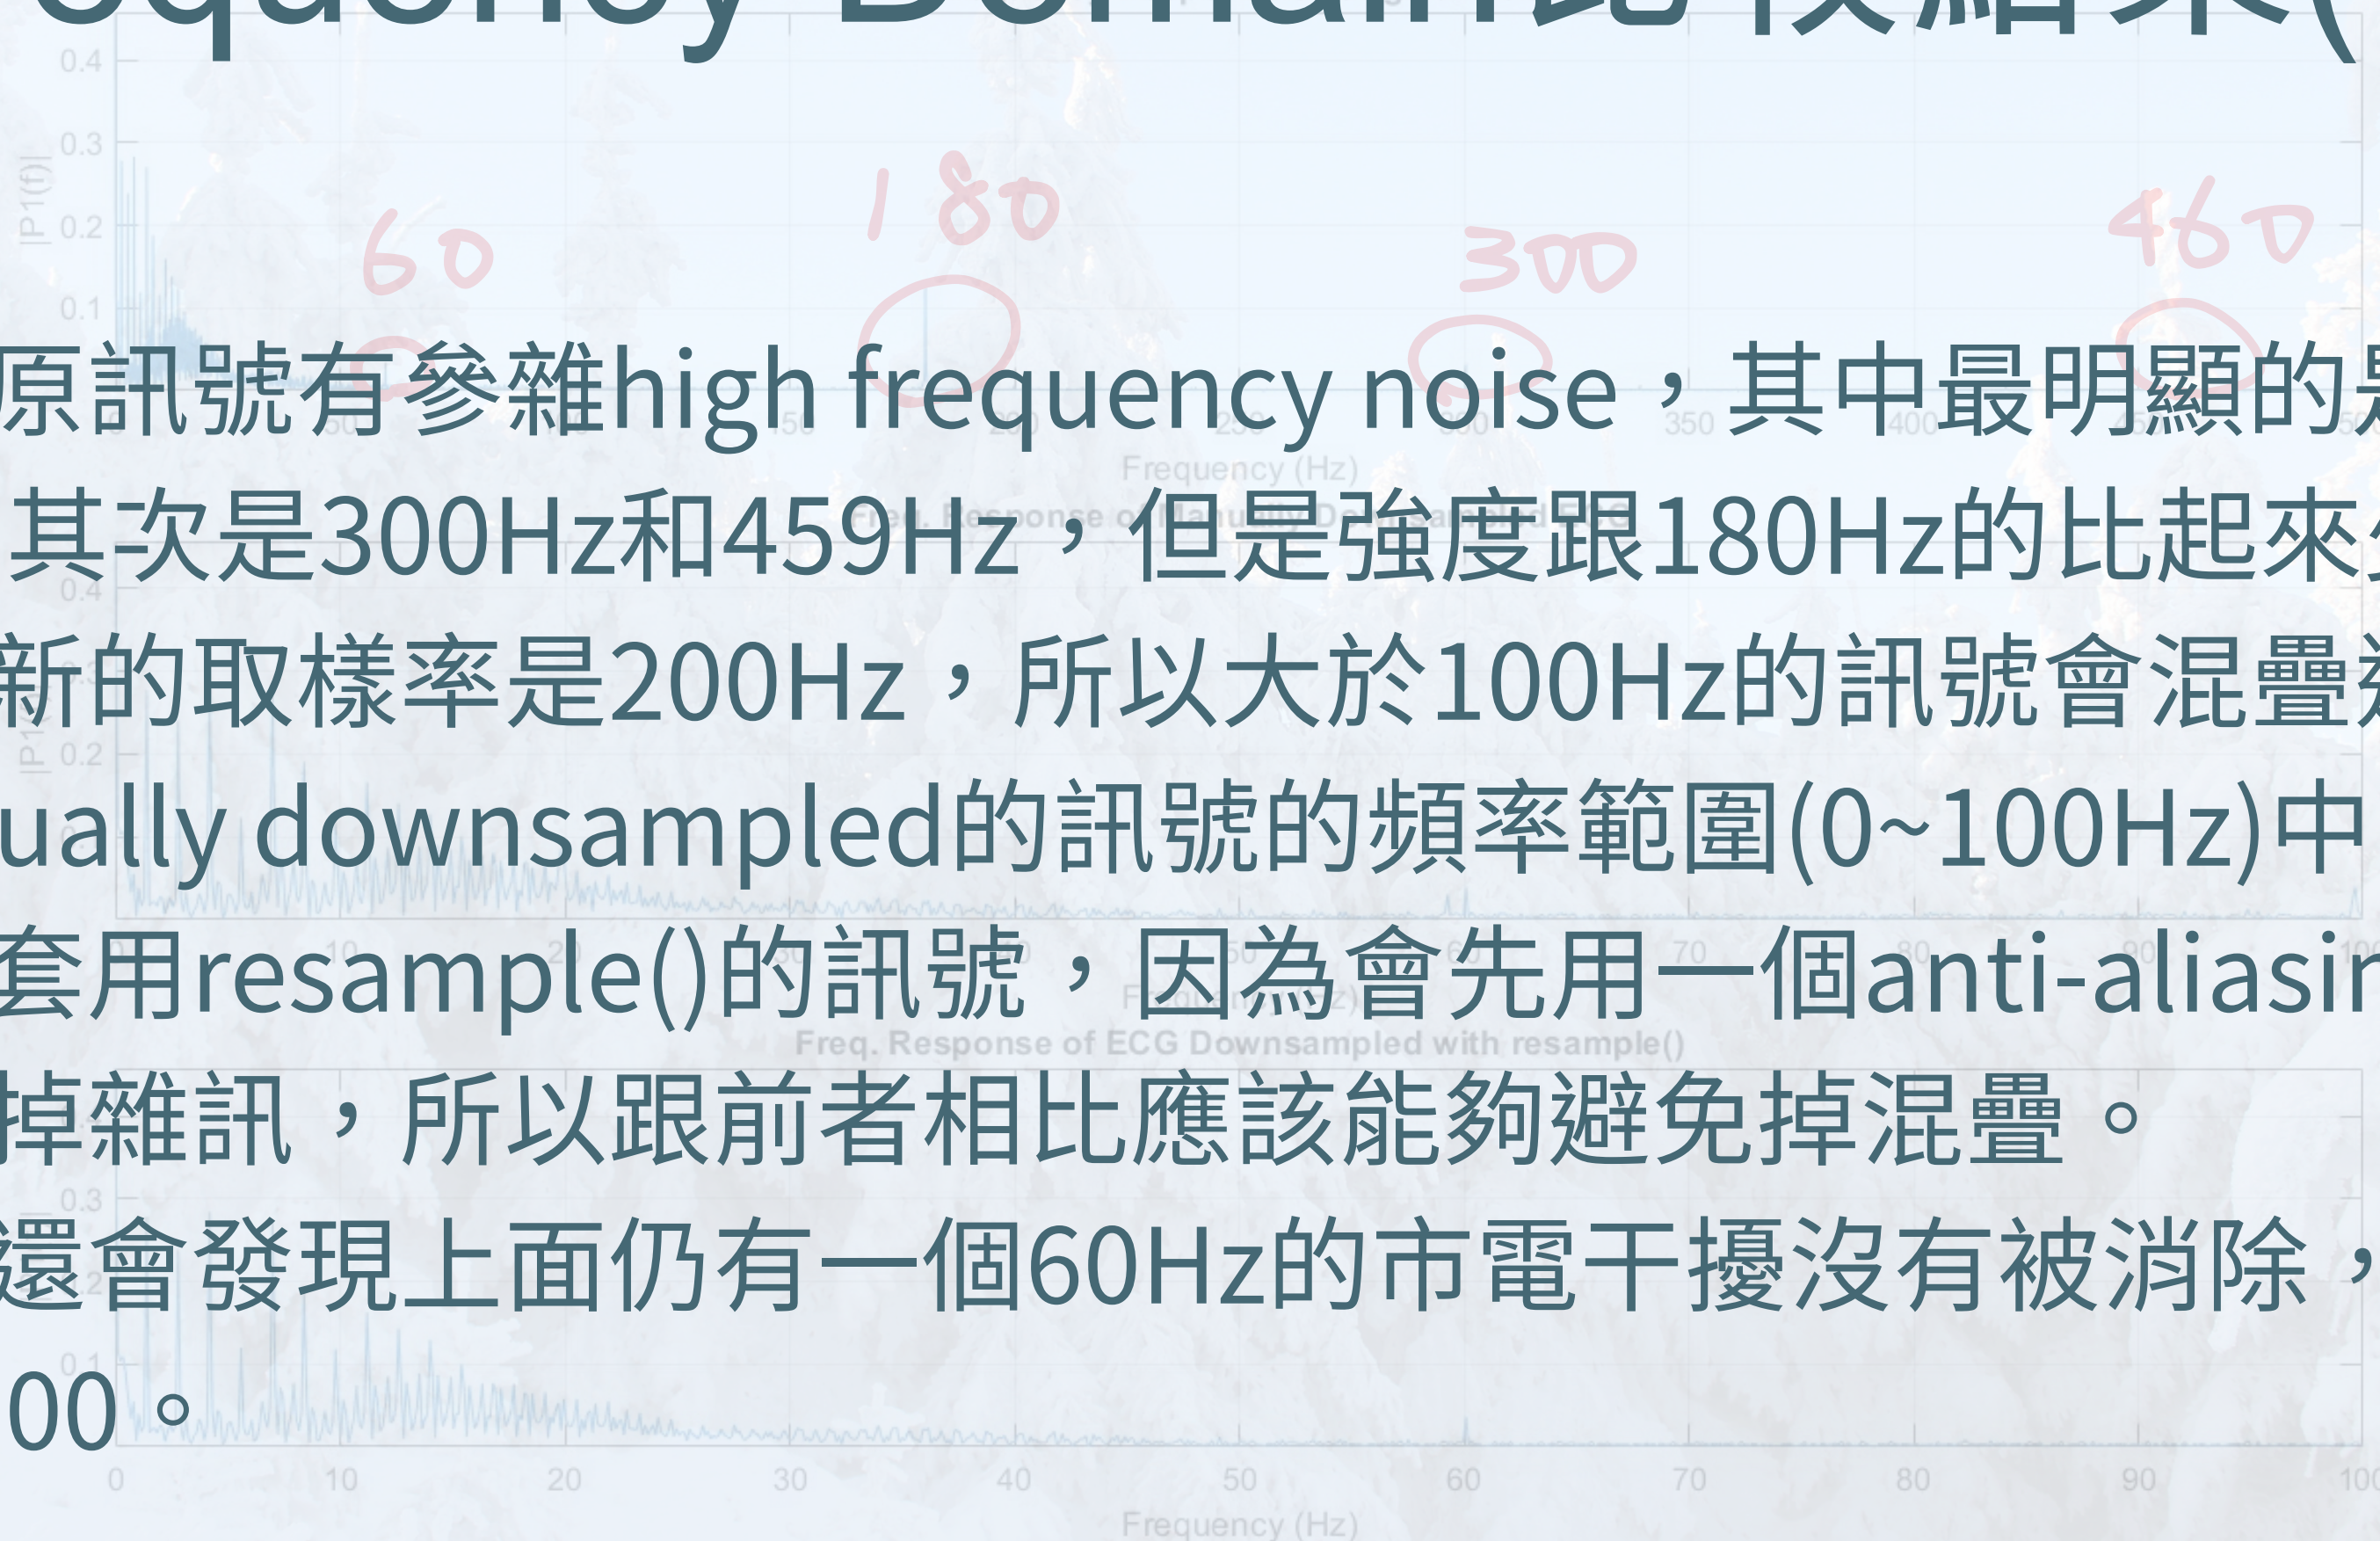

Frequency Domain Comparison (Full Signals)

Frequency Domain比較結果(1)

- 因為原訊號有參雜high frequency noise，其中最明顯的是180Hz的，其次是300Hz和459Hz，但是強度跟180Hz的比起來少一截
- 因為新的取樣率是200Hz，所以大於100Hz的訊號會混疊進manually downsampled的訊號的頻率範圍(0~100Hz)中。
- 至於套用resample()的訊號，因為會先用一個anti-aliasing filter過濾掉雜訊，所以跟前者相比應該能夠避免掉混疊。
- 我們還會發現上面仍有一個60Hz的市電干擾沒有被消除，因為 $60 < 100$ 。

Frequency Domain Comparison (Full Signals)

Frequency Domain Comparison (Full Signals)

Frequency Response of Original ECG

Frequency Domain比較結果(2)

取三個比較明顯的雜訊來觀察混疊現象。

上表是有混疊的，與使用 `resample()` 的形成對比

原雜訊	混疊後
180 hz	20 hz
300 hz	100 hz
459 hz	59 hz

Frequency Domain比較結果(3)

選定雜訊片段的頻域比較

原始雜訊片段的FFT

手動下取樣雜訊片段的FFT

Resample後雜訊片段的FFT

- 取2.755~2.955 s作為雜訊片段觀察混疊現象。
- 在20Hz處混疊尤其明顯，因為原180Hz雜訊的能量相對最高

2. 量化頻域分析 (雜訊片段):

分析頻帶: [1, 99] Hz

頻帶內雜訊能量 (原始片段, 參考`fs_orig`): 0.00983

頻帶內雜訊能量 (手動下取樣片段): 0.041569

頻帶內雜訊能量 (Resample片段): 0.0092064

檢查混疊的頻帶: [45, 55] Hz

混疊頻帶內的能量 (手動下取樣): 0.001306

混疊頻帶內的峰值振幅 (手動下取樣): 0.034528

混疊頻帶內的能量 (Resample): 0.00064994

混疊頻帶內的峰值振幅 (Resample): 0.020953

The background is a monochromatic blue-tinted photograph of a mountain range. The mountains are layered, with some peaks more prominent than others, creating a sense of depth. The sky is filled with soft, wispy clouds. The overall mood is serene and calm.

謝謝~
